Product Description

The Level 1® Convective Warming System consists of a high-flow convective warmer with hose-end temperature control, and is used with a convective warming blanket, and accessories. The convective warmer has three outlet temperature settings, that provide flexibility in patient treatment: 37°C, 40°C, and 43°C. A fourth temperature setting delivers ambient-temperature air. The safety circuit provides an independent means of shutoff that discontinues power to the heater. Over-temperature is monitored and alarms separately for each temperature setting.

Indications

The Level 1® Convective Warmer is intended to prevent and treat hypothermia when temperature therapy is clinically indicated. The warmer can also be used to provide thermal comfort when conditions exist that may cause patients to become too warm or too cold. The Level 1® Convective Warmer can be used with adult or pediatric patients and is intended for use by appropriately trained healthcare professionals in clinical environments.

Precautions

Please see the Instructions for Use/Operator's Manual for a complete listing of the indications, contraindications, warnings and precautions.
